A mark worthy of the work we do.

Six logo options, presented for approval. Each one is a symbol built on an idea about what UXUE does, paired with a custom-drawn wordmark in the company colours: navy and orange.

THE BRIEF

One idea, drawn precisely, in colours we own.

The current logo combines several typefaces, a slab-serif U with stencil cuts, and a loose oval swoosh. None of these parts say anything about security or infrastructure, and at browser-tab size the logo becomes a smudge.

Every option here keeps the company navy **#010066** and orange **#FE941E**. Each one is built on a single meaningful idea, never a plain letter in a shape. Each is drawn on a precise grid, with a simplified version so it stays sharp at 16 pixels.

Current logo, for reference

THE SIX OPTIONS

01

Crossing

Where systems meet.

RECOMMENDED

02

Sentinel

Always watching.

03

Crest

Protection with authority.

04

Interlock

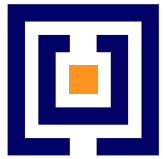

Two systems, woven into one.

05

Keystone

The stone that makes the structure hold.

06

Bastion

Defence in depth, drawn as a plan.

01

RECOMMENDED

OPTION 01

Crossing

Where systems meet.

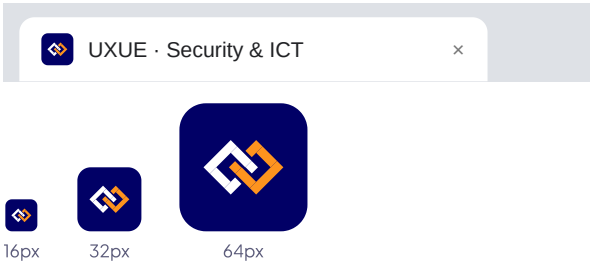

Two links, one navy and one orange, woven through each other. Navy is the physical layer: cameras, access control, cabling and power. Orange is the digital layer: networks, automation and cyber defence.

Each link passes over the other once, so neither sits on top and neither works alone. Where their edges cross in the middle, they draw the **X** at the heart of U·X·U·E.

Integration | Partnership | The X in UXUE

WHY WE RECOMMEND IT

It grows directly out of the Interlock direction already preferred, but adds movement and a hidden letter. It has the strongest outline at every size, and it repeats beautifully as a pattern on stationery, uniforms and vehicles.

OPTION 02

Sentinel

Always watching.

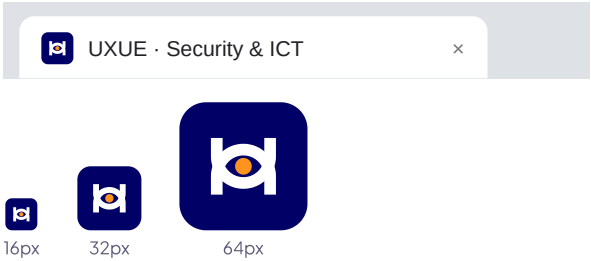

The upright U and the inverted U from the name meet face to face. Their curves cross to form an eye, with the orange pupil at its centre.

Vigilance is the promise behind every security contract, and here it is built from the company's own letters, with an X where the curves cross on either side.

Vigilance | Surveillance | U meets U

ASSESSMENT

This is the most memorable and the most literal of the six. Eye symbols are common across the surveillance industry, so it says "security" loudly and "ICT" quietly.

OPTION 03

Crest

Protection with authority.

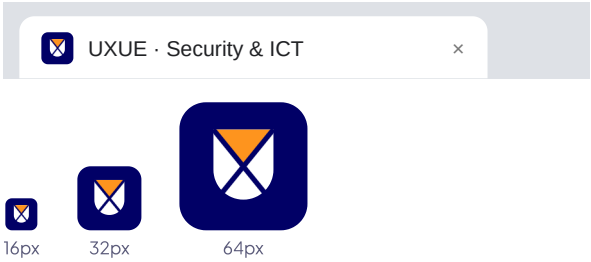

A shield in the shape of a U, divided by an X. The orange crown at the top stands for what UXUE protects, and for the standard it holds itself to.

It is heraldic and institutional, with the visual language of banks, ministries and universities, drawn with modern precision.

Protection | Authority | U and X in one form

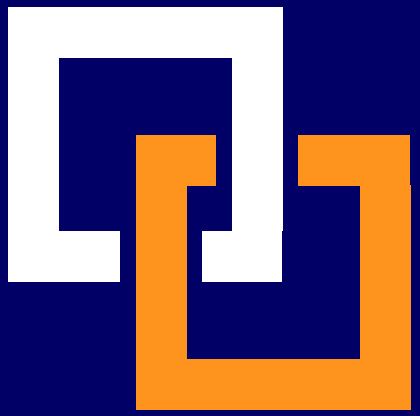

ASSESSMENT

It is the boldest at small sizes and instantly reads as “security”. Because it is a traditional form, it leans towards security rather than networking and ICT.

OPTION 04

Interlock

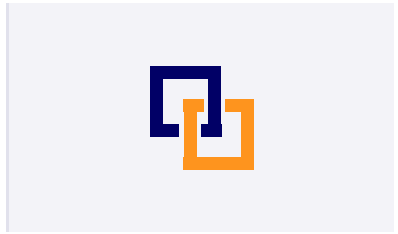

Two systems, woven into one.

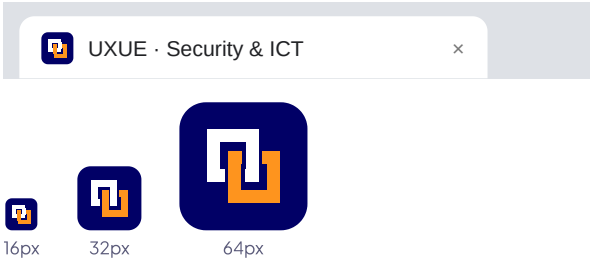

Two closed square links: navy for physical infrastructure, orange for the digital layer. Each passes over the other exactly once.

This is the direction that was liked in round one, now in the new colours. Option 01 is this idea taken further.

Integration | Partnership | Continuity

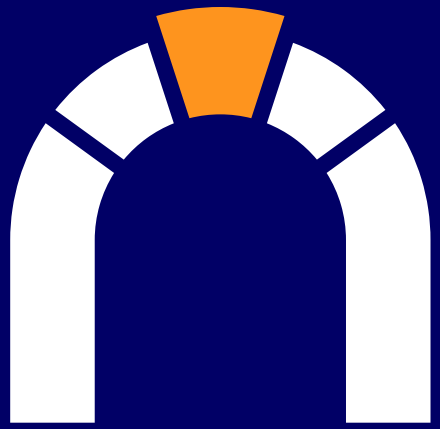

ASSESSMENT

Clear and well liked. Link motifs are common in fintech, which is why Option 01 turns it into a more ownable form.

OPTION 05

Keystone

The stone that makes the structure hold.

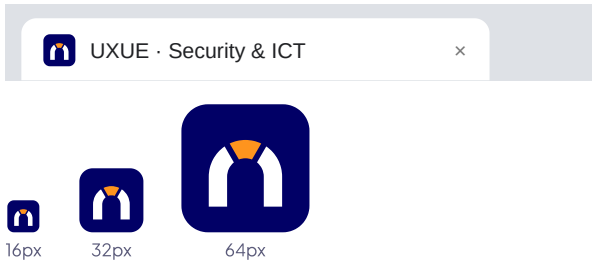

An arch of five stones. The orange keystone is set last, at the crown, and locks every other stone in place.

That is the integrator's role: cameras, networks and software each matter, but integration is what makes them stand as one system.

Integration | Infrastructure | A gateway

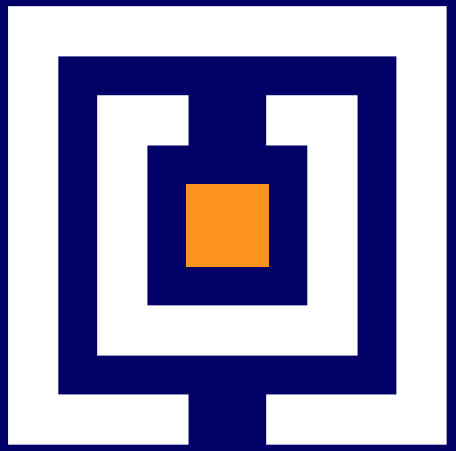

ASSESSMENT

This has the strongest institutional story, but it is a classical form that can feel more architectural than technological.

OPTION 06

Bastion

Defence in depth, drawn as a plan.

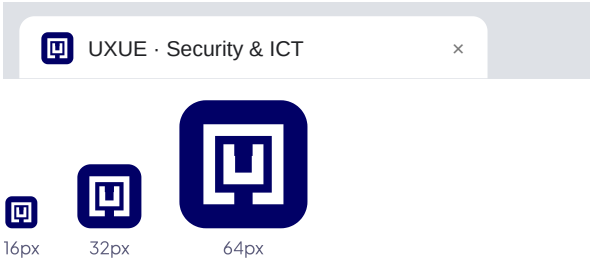

A walled compound seen from above. Two walls each have one gate, staggered so no straight path reaches the orange core.

The core is what clients entrust to UXUE: people, assets and data.

Layered security | Controlled access | A seal

ASSESSMENT

This is the most explicit about security and very legible at small sizes, but it says little about ICT and networking.

SIDE BY SIDE

All six, at the size people will actually see them

Each option in the website header and as a browser-tab icon at true 16 and 32 pixel sizes. A logo earns its place here more than on a poster.

SHARED BY EVERY OPTION

Wordmark and colours

UXUE

A custom-drawn wordmark. The letters are drawn as shapes, not typed in a font, so the name looks identical everywhere and cannot be copied with a keyboard.

Clean geometric capitals with generous spacing, so four letters read as confident rather than loud. The round letters dip slightly below the line so they look level to the eye.

UXUE Navy

#010066

Primary colour for marks, headers and dark backgrounds.

UXUE Orange

#FE941E

Accent only. Strong on navy (7.9 : 1). Too light for text on white (2.2 : 1).

White

#FFFFFF

Main background, and the reversed logo on navy.

Mist

#F3F3F8

Soft supporting background with a hint of navy.

Clear space

Keep empty space around the logo equal to half the symbol's height on every side.

Minimum size

Full logo at 96 px wide on screen or 25 mm in print. Below that, use the symbol alone.

Colour pairs

Navy with orange on white; white with orange on navy. A single-colour version is available for engraving and embroidery.

FOR APPROVAL

Choose one option

☐		01	**Crossing**	RECOMMENDED
☐		02	**Sentinel**	
☐		03	**Crest**	
☐		04	**Interlock**	
☐		05	**Keystone**	
☐		06	**Bastion**	

After approval: final refinement of the chosen mark, then rollout to the website header, footer, browser icon, social sharing image, email signatures and stationery.
